## Air Quality Health Index (AQHI) — Edmonton

# 4.0

Current AQHI at Edmonton McCauley (1.66 km from venue)  
Forecast Sat 2:00 AM: **3.2**

| Health Risk   | AQHI | At-Risk Population                                                                                | General Population                                                                                                     |
|---------------|------|---------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------|
| Moderate Risk | 4.0  | Consider reducing or rescheduling strenuous activities outdoors if you are experiencing symptoms. | No need to modify your usual outdoor activities unless you experience symptoms such as coughing and throat irritation. |

No active Environment Canada weather alerts for the venue.

## Environmental Intelligence Summary

- At Edmonton Folk Music Festival, temperature is 15.2°C and feels near 14.9°C. Winds are 6 km/h from SE, gusting near 14 km/h.
- The nearest current AQHI is 4 at Edmonton McCauley, 1.7 km from the venue.
- The official Government of Alberta AQHI for Edmonton is 4 (forecast tonight: 4, tomorrow: 4).
- A gridded AQHI estimate blending official and community sensors (confidence: High) puts the area near 3.
- The nearest air monitoring station (Edmonton McCauley, 1.7 km) reports fine particulate matter (PM2.5) at 27.0 µg/m³.
- An on-site community sensor ('ACA\_EFMF-Office', 0.3 km) reads 34.5 µg/m³ PM2.5.
- Back-trajectory modeling (HRDPS wind fields, 6 h lookback) indicates the air currently at the venue traveled from the vicinity of a point 53.7 km to the N, i.e. arriving from the N.
- The nearest active fire detection (NASA FIRMS – VIIRS, last 2026-08-07) is 6.1 km E of the venue. The modeled back-trajectory passes within 2.2 km of this fire, making smoke transport to the venue plausible based on wind-field modeling.
- The AQHI forecast for Sat 2:00 AM is 3.
- Precipitation probability reaches approximately 84%.
- Overall operational environmental risk is HIGH. Primary concerns are precipitation.

## Recommendations

- Prepare drainage, electrical protection and wet-weather controls.
- Environment Canada AQHI guidance — general population: No need to modify your usual outdoor activities unless you experience symptoms such as coughing and throat irritation.
- Environment Canada AQHI guidance — at-risk populations: Consider reducing or rescheduling strenuous activities outdoors if you are experiencing symptoms.

## Hazard Snapshot — Overall Risk: High Risk

|                                                                |                                                     |                                                                      |                                                       |                                                            |
